FEU TECH

Technology Driven by Innovation

Chapters 4 – 6

**Presentation, analysis and
interpretation of data**

**Summary, Conclusion and
Recommendations**

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

OBJECTIVES

At the end of the module, the student is expected to:

Identify the different components of Chapter 4, 5, and 6;

List the importance of each chapter;

Enumerate the different guidelines for each chapter.

Apply the techniques and write their own Chapter 4, 5, and 6.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Chapter 4

Presentation, analysis and interpretation of data

Chapter 4 summarizes and presents the results of the data analysis.

The results are presented in a straight-forward and unbiased way. The presentation are geared to the research hypotheses, if any.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

The general guidelines are as follows:

Present only relevant data. Individual scores or raw data should not be reported in the text. If these needed at all, they should be placed in the appendix;

In reporting data, choose the medium that will present them effectively. It will be helpful to summarize the results and analyses through tables or figures;

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

The general guidelines are as follows:

Do not repeat the same data in several places. Likewise do not include tables with data that can be presented as well in a few sentences in the text;

Textual presentation should supplement or expand the contents of tables and charts, rather than duplicate them. Do not expect the tables and figures to do the entire communication for you;

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

**The analysis of data should be objective and logical.
Make a careful distinction between facts and opinions.
Facts, not opinion, should prevail;**

**Note all relevant results, including those that run counter
to the hypotheses;**

**In reporting results of tests of hypotheses, include the
value of the test statistics, degrees of freedom and the
level of significance; and**

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

The section on discussion of findings includes the following:

- explanations, implications and applications of findings;**
- conditions that limit the generalization of the findings.**

Weaknesses in the research design, techniques, or population that may surface should be discussed frankly. Particular attention given to the manner in which these factors may have affected the outcomes of the research; and

- as a way of summarizing the findings for quantitative studies, a reconceptualized framework should be included if the results have modified the conceptual framework in Chapter 1.**

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Normally, it features the following contents in chronological order:

- 1. Statistical Tables and Graphs**
- 2. Textual Presentation**
- 3. Inferences or Interpretation**

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Presentation of Data

Presentation is a way of arranging data into logical, chronological and significant categories and classifications.

There are three ways of presenting data: textual, tabular and graphical.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

A. Tabular Presentation

Tables organize and compress data into standardized forms. They facilitate the study and interpretation.

Most researchers use tables in their textual presentation of data. This is because

- (1) researchers need to give little explanation only since data in tables are arranged and grouped systematically;**
- (2) readers can comprehend and interpret information easily because they can see relationships of data at once, and**
- (3) tables can present ideas that are understood even without reading the textual presentation.**

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Constructing a Table

Tables include a title, a number, heading, a body and if necessary, notes.

Title

The title should identify the table briefly. It need not give background information or describe the results. The modern way of writing titles omits the words Frequency and Percentage Distribution of / Distribution of / According to.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Title / Example

Table 1 Effects of Mass Media

Table title must be written two spaces below the table number. Table title, which is normally written in inverted pyramid format, has content (principal) words in upper case initials and non-content words (articles, coordinate conjunctions, prepositions and infinitive to) in lower case letters except those with more than 5 letters. One should single-space captions with two or more lines.

Title

Table titles should not be in question form. Aside from the inverted pyramid format, table titles may also be written in paragraph form or block style.

In the paragraph form, the first word of the table title is indented five spaces and the succeeding lines are flushed with the left margin, while in the block style, the title is flushed with the left margin of the table

You should be consistent in your choice of table format through out the paper.

Number

Each table in the research paper must be numbered using Arabic numerals. Tables must be numbered and continuously through all the chapters.

Tables in the appendix must be numbered separately from the text. If the paper contains only one table, the number is unnecessary. Only the initial letter of the word “Table” is capitalized.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Heading

Table heading is generally expressed in phrase or clause form. The heading contains the stub and the box head. The stub contains the stub head and the row labels. The stub head tells what the stub contains while the row labels describe the data written in that row. The box head contains the master caption, column caption and column sub caption. Master caption describes the column captions; column captions describe sub column captions.

In the table on the next page, Degrees is the stub head; AB, BSCE, BSE and MA are the row labels; Specializations (Majors) is the master caption; English, History, Mathematics, Science and Totals are the column captions; and F and % are the sub captions.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Table 1

Degrees and Specializations of the Teachers

Degrees Earned	Specializations (Majors)								Totals	
	English		History		Mathematics		Science			
	F	%	F	%	F	%	F	%	F	%
AB BSCE BSE MA	1	1.69	2	3.39	6	10.17	12	20.34	21	35.59
					4	6.78			4	6.78
	2	3.39	2	3.39	14	23.73	13	22.03	31	52.54
					1	1.69	2	3.39	3	5.08
Totals	3	5.08	4	6.78	25	42.37	27	45.76	59	99.99

(Calderon & Gonzales, 1993)

Table Data Spacing

The following are the guidelines in constructing tables for a research paper:

1. A double line written 2 spaces below the title separates the title from the table.
2. Horizontal lines separate the stub head and the column caption.
3. Lines do not separate rows and columns. Rows are double-spaced.
4. Side ends of tables are unruled.
5. A line from the last row of information separates bottom total.
6. Table is separated from the textual presentation by two spaces. If the table succeeds the textual presentation, there should be 3 spaces in between the last line of the text and the table number.

Tables

(If placed after text, observe 4 spaces from text to table number.)

Table 2 (Arabic number, numbered consecutively
throughout the paper)

(Double space)

Job Market Requirements for BS Industrial Education (Upper-lowercase) (Double space)

Competencies (Capitalize only the first word of column headings unless proper noun/ adjective; observe parallelism in constructing the headings.)	Mean (Leave a space before and after headings)	Rank	Verbal interpretation
1. Positive attitude, perseverance, self-discipline and personal hygiene (No period for words or phrases)	4.52	1	Very highly important
2. Personal discipline skills	4.48	2.5	Highly important
3. Ability to understand and convey visual communication	4.48	2.5	Highly important
1. Ability to recognize, formulate and solve problems	4.36	4	Highly important
2. Ability to engage in lifelong learning and acceptance of the need to keep current of the development in the field of specialization	4.32	5	Highly important

(Align all items listed in a table within and between entries.)

(Capitalize only the first word of items in rows if expressed in phrases or sentences; use upper-lowercase for proper nouns or adjectives.)

(If text follows table, observe 4 spaces before typing the first line of the text. Never break your tables; fit them in a page. You may adjust the font size to fit in.)

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

B. Graphical Presentation of Data

A graph is a chart representing the quantitative variations of a variable itself or in comparison with those of another variable. Graphing presents variations, changes and relationships of data in a very attractive, appealing, effective and convincing way.

The common types of graphs used in research are bar graph, line graph, circle graph, pictogram and map graph. You should only choose the graphs which represent best your data to avoid redundancy.

FEU ALABANG

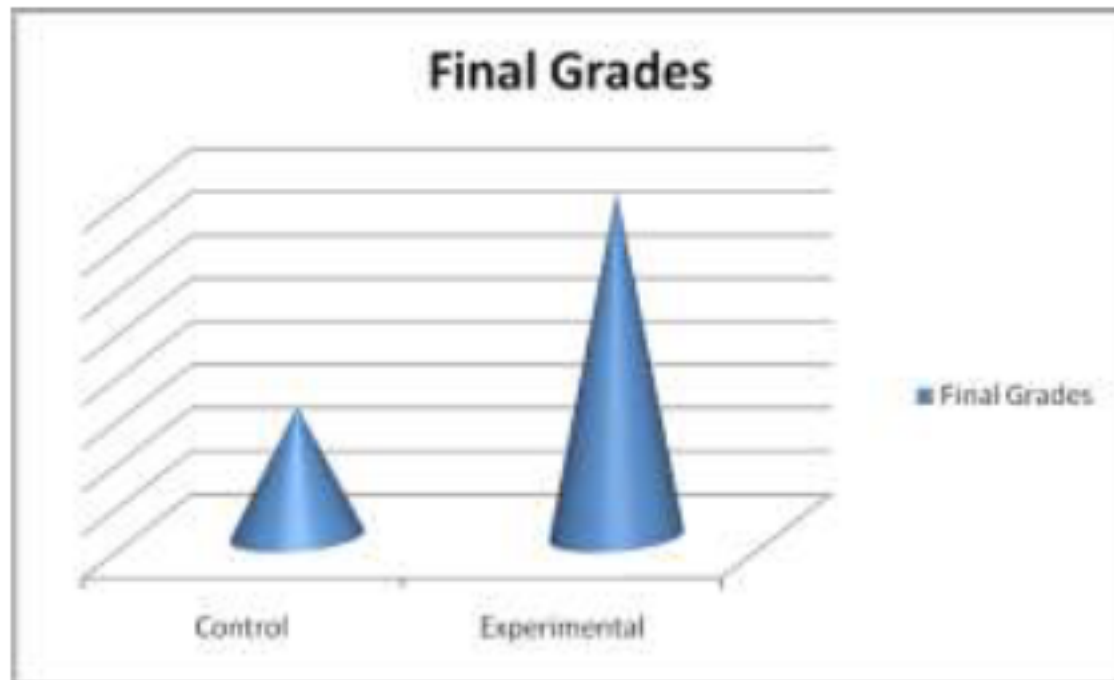

FEU DILIMAN

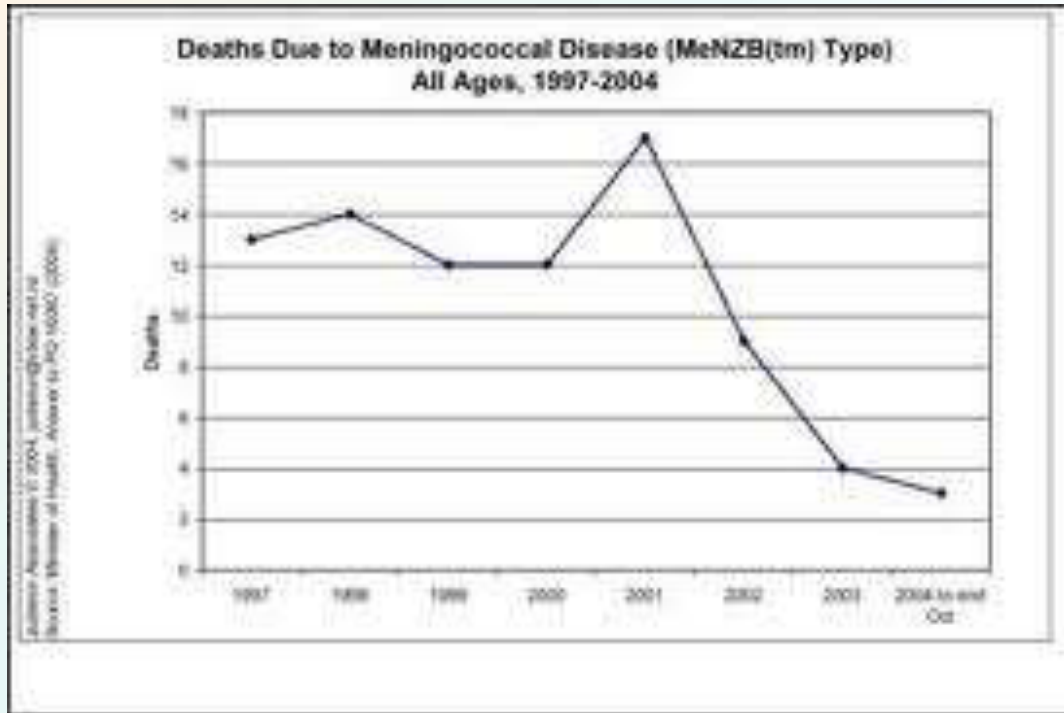

FEU TECH

Technology Driven by Innovation

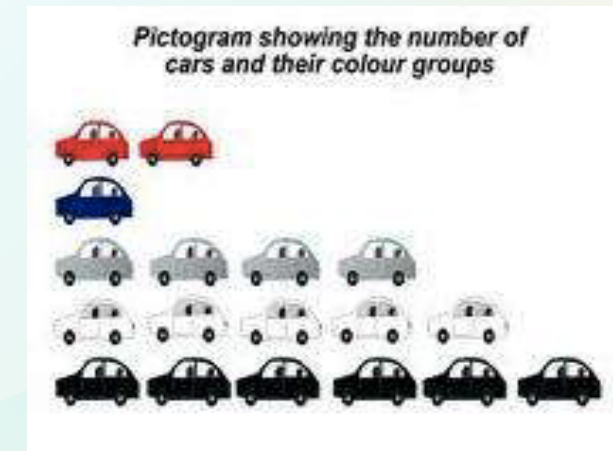

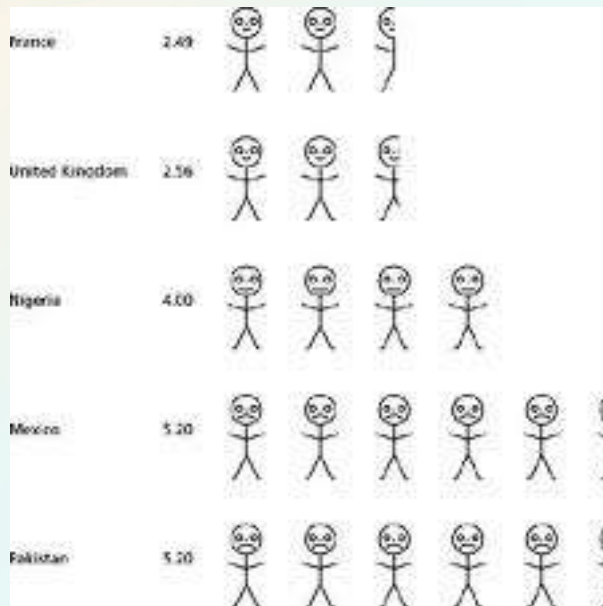

Bar - vertical, horizontal, Multiple component

Line Graph / Circle Pie-chart

Pictogram – picture graph

Map graph or cartogram

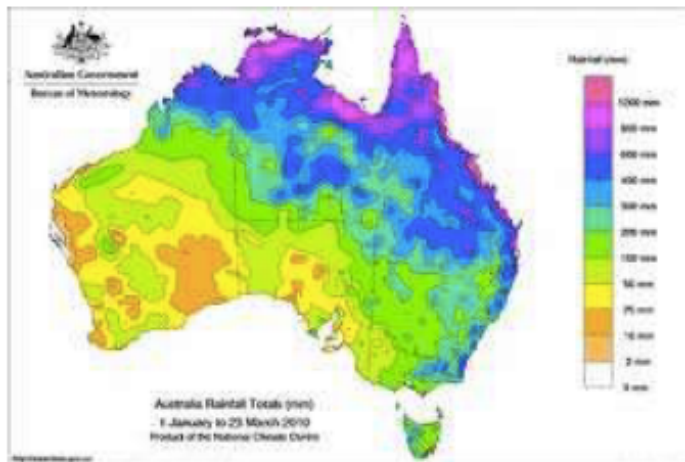

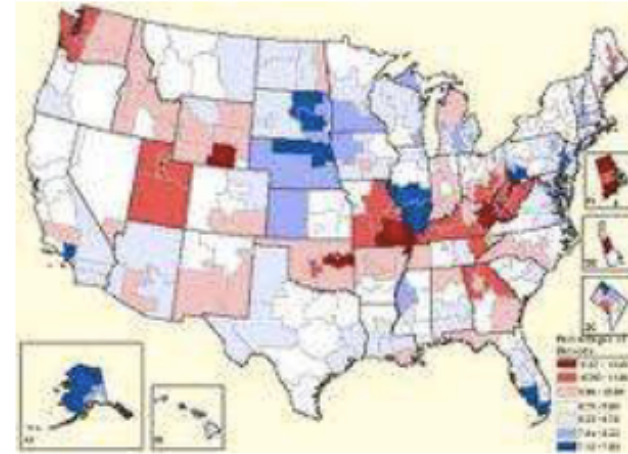

Figure 9. Hunter's Path

C. Textual Presentation of Data

Presenting the data textually involves using statements with number to describe a given data. It aims to highlight some important data and supplement the tabular or graphical presentation

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Interpretation of Data

Interpretation or inference follows the textual presentation of each table in the research. It must have at least three of the following elements presented by Calderon and Gonzales (1993).

- 1. Condition. This refers to the findings discovered in the research.**
- 2. Possible cause of the condition. This refers to the reason for the existence of the condition discovered.**

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

- 3. Possible effect of the condition. This refers to the result of the existence of the condition discovered.**
- 4. The measures to remedy the unsatisfactory condition or to strengthen the favorable one. These are actions or suggestions to be undertaken in response to the existing condition.**
- 5. Comparison of findings with those of previous studies. This is the similar finding confirming the result of previous researches, or theory of an expert in the field.**

FEU ALABANG

FEU DILIMAN

Sample Chapter 4

CHAPTER 4

Presentation, Analysis and Interpretation of Data

This chapter includes the presentation, analysis, and interpretation of data that have been gathered from the questionnaires distributed to the respondents. This chapter also contains the presentation of data in tabular form along with their corresponding interpretations.

1. Characteristics of the Respondents (Align first sub-level headings with the left margin, upper-lowercase, underline.)

1.1 Gender. Majority of the respondents were female with a frequency of 115 or 57.2 percent of the population while the male had a frequency of 86 or 42.8 percent.

(Second sub-level headings should be indented 5 spaces; should start a paragraph; capitalize only the first word; should be followed by a period; underline)

(Align succeeding lines at the left margin)

1.2 Age. The age bracket of 18-27 garnered the highest percentage of 70 or 34.8 percent, followed by 17 and below age group with 33 or 16.4 percent.

2. Respondents' Perceptions as Regards their Home

(When the sub-level heading is too long to put in one line, place continuation on the second line; observe double space; use hanging indentation; underline)

Environment by Gender

2.1 Female. _____

2.2 Male. _____

Table 6

Reactions of the Children of Alcoholics
to Paternal Alcoholism

Reactions	f	%
Anger	16	32
Avoidance	8	16
Silence	21	42
Nurture	5	10
Total	50	100

Out of the 50 children of alcoholics (COAs), 16 or 32 % would tend to react to paternal alcoholism with anger while eight (8) or 16% with avoidance. Twenty-one (21) or 42% of the respondents, however, would react with silence and 5 or 10% with nurture.

Majority of the children of alcoholics in the study had silence and anger as common reactions to paternal alcoholism. Many seemed to stay sober vis-à-vis the drinking vice and behavior of their fathers. This sobriety appears to be a denial of the unwanted domestic experience of having an alcoholic father.

Black (1992) believes that, in alcoholic families, substance abuse and fighting are often denied and children are taught to follow three rules: "Don't talk," "Don't trust," and "Don't feel..." These rules essentially keep the COAs silent about, and worse, deny alcoholism as a family problem.

On the other hand, anger seems to be a regretful reaction which is almost always true for many children with alcoholic parents. The emotion is essentially stirred by the reality that having a family member addicted to alcohol is culturally shameful. Parental alcoholism then breeds personal and social insecurity among the children. However, as suggested by Brennan, familial or unfamiliar relationship facilitates the breaking of the rules of silence and anger among COAs, a condition that makes the children better adjusted in any social situation.

Guidelines in Preparing Chapter 4

1. Leave 1 inch from the top.
2. Type CHAPTER 4 in upper case letters.
3. Leave 2 spaces up to the bottom of the page.
4. Type Presentation, Analysis, and Interpretation of Data.
5. Indent 5 spaces. Write a paragraph describing the nature of the research.
6. Present the first table followed by its textual presentation and interpretation.
7. Do step number 6 until all tables are presented, analyzed and interpreted.

Chapter 5 - 6

This last 2 chapters of the report contains an overview of the research. In theses, it gives a brief restatement of the problem, the procedures, and findings.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

The summary chapter is not supposed to contain any new information. Rather it briefly recapitulates the entire content of the paper. It is as if the scholar was asked by a colleague what problem he has studied and what results he has obtained. He should reply briefly and to the point, sketching all the important points of the study, describing the conclusions and how he had arrived at them.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Broad generalizations not adequately supported by data are to be avoided. Conclusions should be drawn only for the population and circumstances for which the evidence has been collected.

Practical implications that can be drawn from the study are to be included.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

Opinionated statements and suggestions not supported by evidence should be avoided.

Recommendations may be in terms of further research suggested by the study; policies arising from this study, and practical applications.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

GUIDELINES IN WRITING THE SUMMARY OFFINDINGS

1. A brief statement about the main purpose of the study be stated.
2. The findings may be lumped up all together but clarify demands specific questions under the statement of problem must be written first to be followed by the findings that would answer it.
3. Every statement of fact should consist of words, numbers or statistical measures woven into a meaningful statement. No deductions on the interpretation be made.

GUIDELINES IN WRITING THE CONCLUSION

1. Conclusions should not contain numerals.
2. Conclusions should appropriately answer the specific questions raised at the beginning of the investigation.
3. Conclusions should be explicit and definite, leaving merely implied giving the researcher a bit of doubt. The use of qualifiers such as, probably, perhaps, maybe should be avoided.
4. Conclusions should not be repetitions of any statements anywhere in the research, thesis.

RECOMMENDATIONS

Recommendations are based on the conclusions of the study. Give a detailed description of the suggestion for future action based on the significance of the findings. It includes implications for future use of findings and recommendation for future

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation

GUIDELINES IN WRITING THE RECOMMENDATION

1. It should have the aim and effort to solve problems in the study
2. It should ensure a continuous benefit being accorded to the universe – mankind involved.

FEU ALABANG

FEU DILIMAN

FEU TECH

Technology Driven by Innovation
